PRODUCT DATA SHEET

TA-816

Texturing Agent 816

Product #16

Applications

TA-816 is a reactive siloxane polymer blend designed to produce a rough or textured appearance to paints and coatings containing, but not limited to non-leafing aluminum. Systems include: lacquers, alkyd, epoxy, melamine phenolic, polyester and urethane.

Benefits

- Creates Textured Appearance
- Sharpens Definition of Metallics
- Bake or Air Dry
- Easy to incorporate

Recommended Additions

0.5% to 1.5% of total volume. Should be added during or after letdown. For coarse appearance, start @ 0.5% (vol.); increase amount to achieve finer pattern appearance.

Typical Properties

Visc.: 18 - 20 cps

Color: Slightly hazy

Sp. Grav.: 0.899

Solvents: Aromatic 150

Wt./Gal.: 7.41 lbs./gal
